Design the symbiosis of digital components and clothing

A world class team, consisting of Leah Buechley, the very creator of the LilyPad Arduino, and wearable computing experts Maurin Donneaud and Vincent Roudaut, guide workshop participants in the development of their own eFashion item or hybrid wearable. In four days participants conceptualize and materialize their project prototype, assisted by fashion designer Anouk Wipprecht as well as physical computing specialist and Fritzing developer Dirk van Oosterbosch.

Participants should have experience in (fashion) design, physical computing or (basic) programming skills.
