[Mute-tech] Linux dedicated server host required

Hiya

Its one of those perennial issues, looking for a cheap web server host.

We need an additional Web server Linux dedicated server host in the UK.

the specs are as follows

Linux OS

Dedicated NEW or high speed CPU hardware

Friendly support

Large disk capacity

Lox cost bandwidth

Currently we have two web servers, one co location the other a dedicated server, the co location is about 50gbp per month with the dedicated server at 100gbp something like a 30gb bandwidth allowance.

There is a Wiki page here from when we did similar research in 2004

Many thanks

Simon
