Soundtrap is conceived by Beaconsfield as a new portfolio scheme for commissioning sonic works. The first in this new series, Soundtrap I: Daniel Figgis's DOPPLER, is an acoustic re-imagining of Beaconsfield's unique space in Vauxhall. The DOPPLER sound installation is derived directly from a series of ambient sound recordings made within the three discrete galleries.

For the patient and attentive audience, passing from room to room will reveal the sonic reflux of the building itself, allowing them to create their own individual sound experience. This sonic exposure may be further developed through a free downloadable sound archive (please see Beaconsfield website) that will allow visitors to create and recreate their own personalised DOPPLER adaptations and archive.

Part of Architecture Week.
